

the product

All **apaiser** products are created using a patented stone composite formula which requires no sealing or treatment during its life. The unique **apaiser** product is available in various finishes and has the ability to be embedded with virtually any added component.

- Manufactured using crushed marble powder, resin and polymers to create a stone composite mixture, the **apaiser** range is unique and vastly different to CaesarStone, Quarella, Quantum Quartz or Corian
- **apaiser**'s formula creates a finish and feel that is in fact closer to natural stone in look, feel and appeal
- **apaiser** stone composite bathware is manufactured from reclaimed marble and has minimal impact upon the environment. Its manual sanding and hand finishing results in a product more environmentally sensitive than competitive materials, and allows designers to create "eco sensitive" bathrooms with confidence
- The surface of the product can be cut and drilled easily without splitting, chipping or cracking and is resistant to staining, heat & chemicals
- **apaiser** stone composite is simple to clean as the resin and polymers form an impenetrable barrier to liquids. All products can be cleaned with gentle bathroom cleaners, and Jif or acetone may be used on more difficult stains
- In addition to superior performance and stain resistance, the special blend of resin and polymers mixed with natural marble, creates a material which is warmer to touch and lighter than natural stone
- The product is readily adaptable and allows freedom of creativity and total customisation capability for projects
